### UJ Consortium Molding Equipment – Cooling Water Manifold Upgrade Kit

#### Cooling Water Manifold Upgrade Kit (A14D)

Acting upon feedback from the submarine cable industry Tyco Telecom, as members of the Universal Jointing Consortium (UJC), has designed an upgrade kit for the cooling water distribution manifold used with the C-SAMS molding systems. This upgrade kit is also backward compatible with the manufactured discontinued SAMS equipment.

With extended use and limited preventative maintenance, or the use of incorrect coolant, earlier flow gauges may in rare occasions become blocked and partially restrict the flow of water.

The items supplied in this upgrade kit are not intended to be a replacement to normal maintenance, proper use and operation, or the use of correct cooling fluid.

The Cooling Water Manifold Upgrade Kit (A14D) is now available to order.

If any of our customers are unsure which of their Water Manifolds are affected please contact their supplier. If you require any additional details about the upgrade then please contact:
